Circular 24 of 2016: Benefit Definition for Breast Cancer project

The Council for Medical Schemes (CMS) has received feedback on the Draft benefit definition for breast cancer conditions for which the CMS would like to express sincere gratitude to those stakeholders who provided input. Submissions by different stakeholders were reviewed and incorporated into the current benefit definition. The benefit definition project is coordinated by the CMS and aims to define the PMB package, as well as to guide the interpretation of the PMB provisions by relevant stakeholders.

This benefit definition incorporates submissions from stakeholders and consists of the following:

- (i) [Early and locally advanced breast cancer](#);
- (ii) [Locally recurrent or metastatic breast cancer](#).

Stakeholders are reminded that the benefit definition project is an ongoing process and the benefit definition will be updated as new evidence emerges.

Ms. Kate Kgasi

**Acting Senior Manager: Clinical Unit
Council for Medical Schemes**
